1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the cutting insert being thicker in the center than at the edges, as set forth in claims 5 and 6, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5 is the phrase "the inner portion being a circular" is not understood. Perhaps use of the terms "arcuate", or "concave", or "curved" could be used here instead.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Satran et al '146, who shows a milling cutter with all of the recited limitations including a disk tool as seen in figure 6a having a plurality of cutter inserts (1) held by radial screws (48) and two spaced abutment surfaces (as seen in figures 6a and 6b).

Each cutter insert has inwardly converging sides and edges comprising three sections, as best seen in figure 6b, with the outer two sections being straight, and the inner section having curved portions.

As seen in figure 4, the cutting insert is thicker in the middle.

5. Made of record but not relied on are patents to Lacey, Yates, Wildey, Satran '540, Betman, and Heinloth showing pertinent cutting inserts.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken Peterson whose telephone number is 703-308-2186. The examiner can normally be reached on Monday thru Thursday between 7am and 4pm. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Allan Shoap can be reached on 703-308-1082.

In lieu of mailing, it is encouraged that all formal responses be faxed to 703-872-9302. Any inquiry of a general nature or relating to the status of this application should be directed to the receptionist whose telephone number is 703-308-1148.
